Access Launches e-Forms Repository for Citrix^{TM}

Server-based Application Creates Greater Efficiency, Reduced Costs

SULPHUR SPRINGS, Texas, Aug. 17, 2007 – Access, a national provider of paperless workflow solutions for the healthcare industry, has announced the release of its e-Forms Repository (EFR) product in a server-based format. While the original version of EFR remains available, the new EFR reflects a growing demand among hospitals to implement server-based (often called "thin client") applications using remote access technology such as Citrix^{TM}.

The thin client environment allows users throughout the hospital to utilize applications stored on a central server, which saves time for technology workers, enables cost savings and improves information security.

"Our customers are increasingly moving toward 'thin client' environments in order to increase their efficiency, control costs, and ultimately improve their service to patients," said Tim Elliott, president and CEO of Access. "Our version of EFR for Citrix answers that call in every way."

EFR for Citrix uses the same highly secure authentication measures as earlier releases, and contains the same core functionality. Traditional pre-printed forms required to support patient services in hospitals are replaced with on-demand electronic versions.

The new EFR brings these additional benefits to Access customers:

o *Enormous time-savings for IT workers.* The thin client EFR eliminates the need to manually load the program to every user's computer separately. Instead, installation and periodic upgrades are published to a single machine -- the Citrix server -- giving all users access to the most up-to-date program.

o *An opportunity to reduce hardware costs.* Traditionally, each computer using the EFR program required a hard drive on which to store the software. Using the "thin client" environment, customers can perform the same functions on inexpensive workstations with little-to-no storage capacity.

The new release of Access EFR for Citrix is available today. Contact Access at 1-888-448-1811 for more information.

About Access
Access (www.accessforms.com) designs and markets computer software and hardware that enable paperless workflow systems throughout an enterprise. The company's flagship product, Patient Flow System Technology, supports applications such as electronic document distribution, forms automation, records management, and patient documentation security. Access' products are easily integrated into all Healthcare Information Systems (HIS) and are used by hospitals nationwide to help meet federal and state regulatory mandates.
